Habitat

Biome

Biosphere

The place where a population lives is called its habitat. An ecosystem that has several types of habitat is called a biome. The biosphere is the biggest known biome. It includes all of the ecosystems on Earth.

Why do ecosystems change?

<https://www.youtube.com/watch?v=RWeyptLa7rw>

generationgenius.com/videolessons/natural-disasters-video-for-kids/

Natural changes in ecosystems are caused by variations in environmental conditions, such as seasonal changes or the natural development of ecological communities. Fires are frequent in the summer. Often the fires are caused by human activity, but sometimes they're caused by lightning.

Why do ecosystems change?
